

HGKB Supreme LL VIP Regular

Font Format: Opentype TrueType (Opentype TTF)
Designer: Arve Baatevik/Lineto

OpenType Font Variations

OpenType Font Variations allow to incorporate multiple font faces within a font family into a single font.

Variation Axes

The set of axes that make up the font's variation space are defined by an array of variation axis records.

Tag	Name	Minimum	Default	Maximum	Flags
wght	Weight	100.0	400.0	900.0	-
ital	Italic	0.0	0.0	1.0	-

Variation Instances

The instance records define the position within the font's variation space.

OpenType Layout Features

For details about OpenType Layout Features see the [OpenType Layout tag registry](#).

Substitution Features

2₂²²

Access All Alternates
This feature makes all variations of a selected character accessible.

fi

Standard Ligatures
Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers the ligatures which the designer/manufacturer judges should be used in normal conditions.

st

Discretionary Ligatures
Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers those ligatures which may be used for special effect, at the user's preference.

123

Lining Figures
This feature changes selected figures from oldstyle to the default lining form.

7/

Numerators
Replaces selected figures which precede a slash with numerator figures, and replaces the typographic slash with the fraction slash.

7/8

Fractions
Replaces figures separated by a slash with 'common' (diagonal) fractions.

X₂

Subscript
The "subs" feature may replace a default glyph with a subscript glyph.

{G}

Case-Sensitive Forms
Shifts various punctuation marks up to a position that works better with all-capital sequences or sets of lining figures; also changes oldstyle figures to lining figures.

GG

Stylistic Alternates
Many fonts contain alternate glyph designs for a purely esthetic effect; these don't always fit into a clear category like swash or historical. This feature replaces the default forms with the stylistic alternates.

ظيغ

Contextual Alternates
In specified situations, replaces default glyphs with alternate forms which provide better joining behavior.

λ

Required Ligatures
Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers those ligatures, which the script determines as required to be used in normal conditions.

619

Oldstyle Figures
This feature changes selected figures from the default lining style to oldstyle form.

123

Tabular Figures
Replaces figure glyphs set on proportional widths with corresponding glyphs set on uniform (tabular) widths.

/8

Denominators
Replaces selected figures which follow a slash with denominator figures.

x²

Superscript
Replaces lining or oldstyle figures with superior figures (primarily for footnote indication), and may replace lowercase letters with superior letters (primarily for abbreviated French titles).

1st

Ordinals
Replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.

§§

Localized Forms
This feature enables localized forms of glyphs to be substituted for default forms.

[1]

Stylistic Set 1 (Flat Set)
Glyphs in stylistic sets may be designed to harmonise visually, interact in particular ways, or otherwise work together.

[2]

Stylistic Set 2
(Alternate AE)

Stylistic Set 20
(Multiply)

Glyph Composition / Decomposition
To minimize the number of glyph alternates, it is sometimes desired to decompose a character into two glyphs. Additionally, it may be preferable to compose two characters into a single glyph for better glyph processing. This feature permits such composition/decomposition.

Contextual Ligatures
Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. Unlike other ligature features, clig specifies the context in which the ligature is recommended. This capability is important in some script designs and for swash ligatures.

Alternate Annotation Forms
Replaces default glyphs with various notational forms (e.g. glyphs placed in open or solid circles, squares, parentheses, diamonds or rounded boxes).

Ornaments
This feature gives the user access to ornament glyphs (e.g. fleurons, dingbats and border elements) in the font.

Positioning Features

Kerning

Adjusts amount of space between glyphs, generally to provide optically consistent spacing between glyphs.

Mark Positioning

Positions mark glyphs with respect to base glyphs.

Mark to Mark Positioning

Positions marks with respect to other marks.
Required in various non-Latin scripts like Arabic.

All Alternates

All alternates are accessible with OpenType layout feature capable applications. If not specified, the feature is registered for all language systems.
