

# HGKB Riforma Mono LL VIP Bold Italic

Font Format: Opentype TrueType (Opentype TTF)  
Designer: NORM (Dimitri Bruni, Manuel Krebs, Ludovic Varone) (2021-2023)

## OpenType Font Variations

OpenType Font Variations allow to incorporate multiple font faces within a font family into a single font.

### Variation Axes

The set of axes that make up the font's variation space are defined by an array of variation axis records.

Tag	Name	Minimum	Default	Maximum	Flags
wght	Weight	300.0	700.0	700.0	-

### Variation Instances

The instance records define the position within the font's variation space.

*Hamburg*

Light Italic	Table	Tag	Name	Value

# OpenType Layout Features

For details about OpenType Layout Features see the [OpenType Layout tag registry](#).

## Substitution Features

### Access All Alternates

This feature makes all variations of a selected character accessible.

### Contextual Alternates

In specified situations, replaces default glyphs with alternate forms which provide better joining behavior.

### Standard Ligatures

Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers the ligatures which the designer/manufacturer judges should be used in normal conditions.

### Discretionary Ligatures

Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers those ligatures which may be used for special effect, at the user's preference.

### Slashed Zero

Some fonts contain both a default form of zero, and an alternative form which uses a diagonal slash through the counter. This feature allows the user to change from the default 0 to a slashed form.

### Numerators

Replaces selected figures which precede a slash with numerator figures, and replaces the typographic slash with the fraction slash.

### Denominators

Replaces selected figures which follow a slash with denominator figures.

### Fractions

Replaces figures separated by a slash with 'common' (diagonal) fractions.

### Superscript

Replaces lining or oldstyle figures with superior figures (primarily for footnote indication), and may replace lowercase letters with superior letters (primarily for abbreviated French titles).

### Subscript

The "subs" feature may replace a default glyph with a subscript glyph.

### Ordinals

Replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.

### Case-Sensitive Forms

Shifts various punctuation marks up to a position that works better with all-capital sequences or sets of lining figures; also changes oldstyle figures to lining figures.

### Localized Forms

This feature enables localized forms of glyphs to be substituted for default forms.

### Stylistic Alternates

Many fonts contain alternate glyph designs for a purely esthetic effect; these don't always fit into a clear category like swash or historical. This feature replaces the default forms with the stylistic alternates.

### Stylistic Set 1

(Diagonal Endings)

Glyphs in stylistic sets may be designed to harmonise visually, interact in particular ways, or otherwise work together.

### Stylistic Set 2

(Titling f i j t)

### Stylistic Set 3

(Stacked Fractions)

### Stylistic Set 17

(Swiss Franc)

[20]

Stylistic Set 20  
(Multiply)

r̄r̄

Glyph Composition / Decomposition  
To minimize the number of glyph alternates, it is sometimes desired to decompose a character into two glyphs. Additionally, it may be preferable to compose two characters into a single glyph for better glyph processing. This feature permits such composition/decomposition.

1•①

Alternate Annotation Forms  
Replaces default glyphs with various notational forms (e.g. glyphs placed in open or solid circles, squares, parentheses, diamonds or rounded boxes).

Ornaments  
This feature gives the user access to ornament glyphs (e.g. fleurons, dingbats and border elements) in the font.

## Positioning Features

Mark Positioning  
Positions mark glyphs with respect to base glyphs.

Mark to Mark Positioning  
Positions marks with respect to other marks.  
Required in various non-Latin scripts like Arabic.

## All Alternates

All alternates are accessible with OpenType layout feature capable applications. If not specified, the feature is registered for all language systems.
